

Every signal, every corner

19 price signals × 6 markets

+ 153 published factors

2013–2026, after costs

What works everywhere, not just in one market?

US · Europe · UK · Denmark · Scandinavia · World
point-in-time index members, 10 bp per side
beta-neutral books pay for their leverage
JKP factors: US, UK, Denmark, World ex US

FINDING 1

After 38 tests, no winner survives alone

Largest $|t|$: Same-month seasonality $t -3.4$ · Low skewness $t -2.8$ · Low beta $t +2.4$ · Low net tail $t -2.1$
Thirteen years of large caps can't prove a single signal.

FINDING 2

Momentum and low beta point the right way

Momentum: 5 of 6 markets in my data · 4 of 4 published segments (t 4.4)

Low beta: 6 of 6 after beta, borrow and leverage costs

FINDING 3

19 signals, really two bets

One low-risk block of nine (MAX, MIN, range, volatility, beta)

one momentum block of four. Same structure in US, EU, World.

FINDING 4

Fundamentals: debt issuance and profit growth

Positive in every JKP segment since 2013 (t 6.2 and 2.5)

Value, investment and accruals faded in the US

FINDING 5

Scandinavia marches to its own drum

Agreement with the other markets on what works:

Scandinavia 0.07 · Denmark 0.41 · World 0.60 · US 0.58

NEXT

Into the multifactor model

Carry: low beta, momentum, residual momentum, 52-week high

Add: debt issuance, profit growth

Drop: seasonality, reversal, skewness
